DPK CONSULTING

Are Your Customer's DPCC Plan Deadlines Coming Soon? Benefit 7 Ways by Working with DPK Consulting!

In New Jersey, Discharge Prevention, Containment, and Countermeasure (DPCC) Plans must be renewed every three years. For facilities with an approved or conditionally approved DPCC plan, the renewal must be submitted 180 days before the expiration date of the existing plan. This renewal process requires either revised plans reflecting any updates or a certification that the existing plans are current and compliant. Failure to submit a renewal on time could result in the plan being considered expired.

A professional surveyor is vital to creating an accurate and effective DPCC plan, as their expertise ensures precise site layout, flow control, and compliance with regulatory requirements. DPK's input and precise mapping helps prevent environmental hazards and ensures the facility is well-prepared to contain and counteract any potential spills.

DPK's DPCC solutions deliver extraordinary value.

Benefit from:

1. Accurate Site Mapping and Layout
2. Highly Detailed Topographic Data
3. Critical Drainage Systems and Flow Paths
4. Ongoing Compliance with Regulations
5. Boundary and Infrastructure Identification
6. Design Support for Contaminant Systems
7. Crucial Elevation and Grading Data

If your customer's current DPCC plan is set to expire in 2025, you would need to submit the renewal 180 days prior to that expiration date, making it essential to review the exact timeline based on when your last approval was granted.

DPK Consulting is here for you! Call to discuss your DPCC Plan status and we'll provide you with an estimate and schedule to help with your plan updates.
